What is AutoFill?

❖ **AutoFill** is a feature in Microsoft Excel that automatically fills cells with data or formulas.

❖ It is used to:

- Save time
- Reduce typing
- Create sequences
- Copy formulas
- Fill dates automatically
- Repeat information
- Example: 1 2 3 4 5

AutoFill Fill Handle

- The Fill Handle is a small square at the bottom-right corner of selected cell.

Steps:

- Select a cell
- Move mouse to bottom-right corner
- Cursor becomes + sign
- Drag down or across
- Release mouse
- Excel fills automatically

AutoFill Example

- Step 1: Type 1 in A1
Step 2: Type 2 in A2
Step 3: Select A1:A2
Step 4: Drag down
- Result: 1 2 3 4 5 6
- Type Monday
Drag Fill Handle
- Excel fills: Monday
Tuesday
Wednesday
Thursday
Friday

AutoFill Months Example

- Type January
Drag down
- Result: January
February
March
April
May

AutoFill Text With Numbers

- Type: Student 1
- Drag down
- Result: Student 1 Student 2 Student 3 Student 4

AutoFill Formulas

- Example formula: =A1+B1
- Drag down
- Excel changes automatically: =A2+B2 =A3+B3 =A4+B4
- This saves time when copying formulas

Column Width in Excel

❑ Column Width controls horizontal size of column.

➤ Used when:

- ✓ Text not visible
- ✓ Numbers hidden
- ✓ Table formatting needed
- ✓ Improve readability

Change Column Width (Method 1)

Steps:

- Select column
- Move mouse to column header border
- Drag right or left
- Release mouse
- Column width adjusted

Change Column Width (AutoFit)

Steps:

- Select column
- Double click column border
- Excel automatically adjusts width according to longest text.
- This is called AutoFit Column Width

Row Height in Excel

- Row Height controls the vertical size of rows.

Used when:

- Text wraps
- Large font used
- Multiple lines
- Better readability

Change Row Height

Steps:

- Select row
- Move mouse to row border
- Drag up or down
- Release mouse
- Row height changes

AutoFit Row Height

- Steps:
- Select row
- Double click row border
- Excel adjusts height automatically

Change Row Height(Second Method)

Steps:

- Select the row.
- Go to Home.
- Click Format.
- Select Row Height.
- Enter the desired height.
- Click OK.
- AutoFit:
- Choose:
- Home → Format → AutoFit Row Height

How to Rename a Worksheet

- There are several ways to rename a worksheet.

Method 1:

- Right-click the worksheet tab.
- Select Rename.
- Type the new name.
- Press Enter.
- Example:
- Sheet1 → Students

Text Formatting in Microsoft Word

- Text Formatting means changing the appearance of text.

Common formatting options include:

- Font
- Font Size
- Bold
- Italic
- Underline
- Font Color
- Text Highlight
- Example:

Computer Fundamentals

- can be made bold, larger, or given a different font.

Paragraph Formatting

- Paragraph Formatting controls the appearance and position of a paragraph.

It includes:

- Alignment
- Line Spacing
- Paragraph Spacing
- Indentation
- Bullets
- Numbering
- Paragraph formatting makes documents clear and professional.

Text Alignment

- Alignment determines where text is positioned on the page.

Microsoft Excel provides Three main alignment options:

- Left Align
- Center Align
- Right Align
- These options are available in the Paragraph group.
